### AutoCAD Crack (LifeTime) Activation Code

NOTE: CADCOM is a discontinued application that is no longer supported by Autodesk. Products AutoCAD was one of the first to be released and is still one of the most popular CAD systems today. It is one of the oldest cross-platform PC-based CAD systems. It has won numerous awards and is regarded by many as the industry standard. In 2005, Autodesk acquired Tamtam International, a company that developed an alternate version of AutoCAD, known as Tamtam CAD. This alternative system is a more compact, simple and easy-to-learn, but less feature-rich version of AutoCAD. AutoCAD LT (2007) was a stripped-down version of AutoCAD's traditional platform that provides an entry-level, low-cost solution to the common needs of basic drawing and engineering. Its aim is to enable new users to quickly and easily produce drawings. AutoCAD 2010 has the same drawing and modeling tools as the traditional AutoCAD version but adds the ability to create 2D and 3D solids. In 2010, Autodesk launched its cloud-based collaborative platform, Autodesk 360, as a browser-based application. Autodesk 360 features in-context collaboration, data, information, and process management tools, providing a platform that supports users' workflows. Design Center (Autodesk Build) was launched in 2011, as an iOS (iPhone, iPod touch, and iPad) app. Autodesk Build, featuring all Autodesk products, including AutoCAD, AutoCAD LT, AutoCAD WS, Inventor, AutoCAD 360 and other Autodesk products was released for iOS in 2011 and was updated in 2017 to include the AutoCAD mobile apps. 2013 saw the launch of AutoCAD software on the Zebra Mobile Appstore, allowing users to connect, view, edit and annotate AutoCAD drawings from their iPhone, iPad and Android devices. In 2013, Autodesk introduced the Autodesk Impact technology, which allows the user to remotely connect to another user's AutoCAD instance and make changes in real-time. 2015 saw the launch of a new feature in AutoCAD which allows users to mix and match previously stored and unique drawings from other users on the same computer. The feature was first introduced to AutoCAD R16 and was later introduced to AutoCAD LT a1d647c40b
