After my friends bought a PC with Windows 7 Home Premium I decided to install win7 on it, along with Window 8.1 as well. A few weeks ago while I was backing up the system (after getting it from some of my friend), I got the.slic file of the newest bios. The.slic file was in a usb. I installed it on the computer and it worked fine. My computer was still in warranty so I couldnt wait to install the latest bios. But the first thing I saw was that it was SLIC 2.1 (not 2.0 that I had before). Related Links. Home Related Links. Games Popular Updates Official Bios Updates Additions & Support Help & Feedback.
