AutoCAD is a computer-aided design (CAD) and drafting tool that creates three-dimensional (3D) objects and two-dimensional (2D) drawings. It allows users to quickly create an object, modify it, or view and print it. It was introduced in 1982. It is used to model an object and determine its geometry, without using any external measures (like tape measures, protractors, and verniers). The AutoCAD tool is designed for professional users of architectural, civil, mechanical, and manufacturing industries. It is used to create, modify, and present designs of all types, from simple 2D drawings to complex 3D models. Features Of AutoCAD AutoCAD offers several major features that make it unique from other CAD systems: Solid Modeling AutoCAD offers precise modeling and construction of 3D models. Parametric Modeling Parametric modeling and editing of complex geometric shapes with a single control point, or multiple points and multiple control points. Drafting AutoCAD can draw freehand or on predefined paths. Users can draw either orthogonally or non-orthogonally (including "Lagrange" paths). Interactive Building Design Developers can use the Dynamic Reference (DR) system to display dynamic 3D objects in their applications. To study the similarities in brain activation and neural processing associated with habitual and episodic second language (L2) use, 24 Mandarin-speaking healthy adults participated in an fMRI study where they read sentences in their L2 or first language (L1). A novel scoring system was designed to classify participants as habitual, episodic, or non-users based on their L2 and L1 scores. The four groups, habitual users of both L2 and L1, habitual users of L1, episodic users of both L2 and L1, and episodic users of L1, showed similar patterns of activation in left superior temporal gyrus and insula for both L2 and L1 sentences. An analysis of individual differences showed that those with poor scores on the Memory for Words test, a measure of working memory, showed less activation in these regions.Serum lipoprotein patterns in blood donors: distribution of low- and high-density lipoproteins in relation to age and sex. Lipoproteins were separated by means of heparin-Sepharose affinity chromatography from serum of blood donors, and lipoprotein patterns were determined by using polyacrylamide gel electrophoresis. A new classification system of low-density lipoprotein (LDL) and high-density lipoprotein (HDL) was proposed and used to study the blood donor population. Age and sex-specific distributions of LDL and HDL were determined and were ca3bfb1094
