In recent years, vehicles have been configured with various devices, including those to which new functions are added or some of the functions are expanded. Meanwhile, an autonomous cruise control (ACC) has been known as a function that requires a complex operation. In a route guidance system including an ACC function, a number of operations are performed to make the vehicle travel along a route along which the vehicle is to travel, and the route guidance is executed after a route to be followed is input. There are demands for an improved user interface (UI) and a simplified route guidance during a route guidance process. As an example, Japanese Unexamined Patent Application Publication No.
