Microsoft has contributed to open-source projects to create and contribute its own .Net Native-based UI technologies. Since Windows 8, Windows Server 2012, and Windows Server 2016 have been released, they can be installed or upgraded from previous versions such as Windows 7, Windows Server 2008, Windows Server 2008 R2. If you are planning to deploy Windows Server 2016 to your Windows 8 clients with an existing image, you can use the Windows Server 2016 x86 image for deployment and upgrade. Only installation of Windows Server 2016 with the direct install from media can be deployed to a Windows 8 client. Installing or upgrading Windows Server on a computer that does not have previous Windows Server versions installed will fail to install or upgrade the operating system. In this case, you must use one of the other installation types listed above. When your Windows operating system version runs out of support (meaning the service pack is no longer available), Microsoft provides information on Windows lifecycle policies here: <http://www.microsoft.com/en-us/lifecycle>. Microsoft will also notify you when support ends.

Some users have reported that Cubase 7 is not compatible with Windows 8, but I have had no problems with Cubase 7 and Windows 7 or Windows 8 so far. Cubase 8 is crashing for me without any reason when I start it. I'd appreciate some assistance as well. I am trying to use an MOTU UltraLite mk3- hybrid with cubase 9.4. If I go to "Windows mixer control panel" and try to open a track, nothing appears. If I click on the specific channel, I can see the track there but nothing happens when I move the faders. 5ec8ef588b
